PROFESSIONAL SUMMARY

Software Engineering graduate focused on building intuitive, responsive web interfaces and production-ready applications. Experienced in architecting component-driven user interfaces, managing complex client-side state, and building robust authentication and role-based workflows. Dedicated to clean code, micro-interactions, and leveraging modern developer workflows to deliver polished digital products rapidly.

TECHNICAL SKILLS

- Tech Stack: React, Next.js, TypeScript, JavaScript, Tailwind CSS, shadcn/ui, TanStack Query, Redux Toolkit, Zod, Supabase, PostgreSQL, Node.js, Git, Vercel, Cloudflare
- Tools & Design: GitHub, Vite, Figma, Postman, Claude Code, Codex
- Languages: English (Fluent), Burmese (Native), Thai (Conversational)

FEATURED PROJECTS

Hotel del Luna Console | Front Desk & Hotel Management Platform

Tech Stack: React, TypeScript, TanStack Query, Supabase, Tailwind CSS, shadcn/ui, Recharts

- Architected a complete front desk operations console supporting real-time room reservations, guest triage, and interactive two-week room occupancy charts.
- Implemented secure role-based access control (RBAC) across Admin and Staff tiers, enforcing fine-grained mutation privileges via Supabase Row-Level Security (RLS) policies.
- Streamlined front desk workflows by caching server state with TanStack Query and building deep-linkable search filters with a global quick-action command bar.

Verona | Italian Pizza Ordering & Tracking Application

Tech Stack: React, TypeScript, Redux Toolkit, React Router, Tailwind CSS

- Developed an end-to-end food ordering platform with dynamic topping customization, automated cart recalculations, and priority delivery options.
- Architected persistent client-side state using Redux Toolkit to preserve cart items, checkout progress, and user session data across browser reloads.
- Built real-time order tracking featuring live countdown delivery timers, automated polling updates, and reverse-geocoding browser APIs for one-click address autofill.

WORK EXPERIENCE

Botnoi Group — Bangkok, Thailand
Solution Engineer Intern — Jan 2026 – Apr 2026

- Engineered conversational AI workflows and prototypes across healthcare, education, and recruitment, including a virtual patient voicebot showcased in an official company demo.
- Designed structured symptom-assessment interaction flows for hospital-grade chatbots, conducting systematic test cases to triage edge cases and resolve conversation bottlenecks.
- Developed Google Apps Script backend APIs to automate data pipelines and synchronize conversational interfaces with internal operational workflows.

EDUCATION

Mae Fah Luang University | GPA: 3.8 — Chiang Rai, Thailand
Bachelor of Engineering in Software Engineering — Aug 2022 - May 2026
